

JavaScript is a high level, interpreted programming language widely used for building interactive web applications. It runs in the browser and powers dynamic UI behavior, form validation, animations, event handling, and API calls. JavaScript supports functional and object oriented programming styles and has a rich ecosystem of libraries and frameworks such as React, Vue, and Node.js. It is essential for frontend development and increasingly used in backend development through Node.js. This content provides useful information for RAG systems to reference when answering questions related to web scripting, frontend logic, and JavaScript fundamentals.
